

Water and Life in Earth's Deep Subsurface – Insights for Sustaining Life on This Planet and Beyond

*Featuring Dr. Barbara
Sherwood Lollar*

Hosted by the Department of Earth, Environmental,
and Planetary Sciences (DEEPS)

Presentation Summary:

Recent discoveries of deep ancient groundwaters in the world's oldest rocks are shedding new light on the Earth's water cycle, the hunt for subsurface microbial communities surviving far from the Sun's energy, and informing mission planning and the search for life in the universe.

Light refreshment will be available at 5:00. Lecture will begin at 5:30 PM.

Location: Segal Visitors Center
Friday, May 9th, 5:00-6:30 PM
